Myriad Wall Systems Illuminate Change

Interchangeable Panels Offer Endless Possibilities, Even Backlighting

DOVER, Ohio — Marlite Inc. has introduced Myriad™ Wall Systems – a pre-engineered hardware system of extruded aluminum framework that can be used with interchangeable, decorative panels incorporating a wide variety of materials from transparent, to translucent, to opaque. The interchangeable panels snap in and out of the framework in a matter of seconds enabling customers to mix, match, accent, change and backlight wall statements quickly and easily.

“The ability to use any variety or combination of materials greatly enhances the system’s visual appeal,” said Kevin Krieger, Marlite Product Development Manager. “And because they can be changed on the fly, these decorative wall panels can be transformed from a rich-looking opaque to an alluring translucent, backlit panel.” According to Krieger, maintenance or building managers can completely change the look and feel of their environments in a matter of minutes.

Krieger added that, “Proprietary graphic panels can be made to signal changes in seasons, product information or special announcements or recognitions. What’s more, you don’t need maintenance staff or construction crews to change the panels. The decorative frames can be removed by any on-site staff using a simple putty knife or even a plastic burnishing tool.”

Myriad Wall Systems can be used in retail stores, restaurants, healthcare and corporate facilities, hotels, fitness centers, schools and more. “Imagine changing the panels to reflect the seasons, or restaurants can change wall designs to coincide with menu changes,” Krieger continued.

Myriad provides a wide variety of decorative panels in opaque, transparent or translucent finishes to choose from in creating a wall design. Custom panels are also readily available. Panel materials include wood and metal veneers, perforated metals, decorative laminates, stone, fabric, acoustic and clear. Translucent acrylics with exotic patterns and images for decorative backlighting are also available. In addition, custom constructions, surfaces and customer graphics can be incorporated onto specially designed panels.

The rugged aluminum hardware frames can accommodate panels as large as 32×48-inches and up to ¾-inch thick.

Easy to install, the aluminum hardware is available in radius and flat profiles with a choice of clear-satin anodized or black-satin anodized finishes. To achieve a smooth and secure fit into the wall framework, Myriad's unique panel framing holds decorative panels with standard "snap-fit" fasteners that can be pressed into place by hand. Panels can be removed in seconds using simple, everyday flat tools.

For more information about Myriad and Marlite's full line of wall systems and display products, call 330.343.6621, or visit www.marlite.com.

Marlite is a privately-owned, leading manufacturer and distributor of retail merchandising and commercial wall systems. In addition to retail chains, Marlite provides products and systems to distinct commercial markets such as education, healthcare, transportation and many more. Founded in 1930, Marlite has its primary manufacturing plant and is headquartered in Dover, Ohio and has additional fabrication and distribution centers in California, Florida, South Carolina and Texas as well as Ontario, Canada. The company is also the sole North American manufacturing licensee and distributor for Visplay International GMBH.
