

There are is no MSDS/SDS for Engineered Profiles (EP) finished goods.

The products manufactured by EP are considered “articles” under the Hazard Communication Standard and are exempt from requirements of the Standard according to OSHA).

Products that are manufactured into an “article” are whole units that do not pose a risk in that they cannot be ingested, inhaled, or absorbed into the body through the skin, eyes, or mucous membranes under normal conditions of use. Because of this, these products are exempt from the MSDS requirements.

THE OSHA STANDARD

“1910.1200(c)

Definitions. Article means a manufactured item other than a fluid or particle: (i) which is formed to a specific shape or design during manufacture; (ii) which has end use function(s) dependent in whole or in part upon its shape or design during end use; and (iii) which under normal conditions of use does not release more than very small quantities, e.g., minute or trace amounts of a hazardous chemical (as determined under paragraph (d) of this section), and does not pose a physical hazard or health risk to employees.”

Reproduced from:

https://www.osha.gov/pls/oshaweb/owadisp.show_document?p_table=standards&p_id=10099

While the products manufactured by EP are produced from raw materials that are fluids or particles, once formed into a whole unit, or “article”, the material cannot be spilled, consumed, ingested, inhaled, or absorbed. EP maintains the MSDS on file for these raw materials for the safety of our employees and as required. Once these raw materials are manufactured into the finished product the potentially hazardous nature of the raw material is irrelevant as the chemical cannot be released.

Please let me know if I can be of further assistance.
